

CaseLoad

myCaseLoad Reporting

myCaseLoad employs Microsoft SQL Server Reporting Services (SSRS) to add a rich reporting environment to your solution. MyCaseLoad integrates seamlessly with SSRS. This environment includes the capability to report on any case type, issue or statistic, captured in your CaseLoad system, producing useful business information in a range of formats. Screen shots depict how a Microsoft SSRS report can be selected, customized and viewed in MyCaseLoad.

The screenshot displays the myCaseLoad Reporting interface. At the top, there is a navigation bar with the myCaseLoad logo, a search box, and a 'Case Number' dropdown. Below the navigation bar, there are four menu items: 'Actions', 'Search', 'Generate', and 'Tools'. The main content area is titled 'myCaseLoad Reports' and contains a table of reports. The table has two columns: 'Name / Description' and 'Last Modified'. The 'Case Details Report' is selected with a checked checkbox. A 'Generate' button is located at the bottom right of the report list.

Name / Description	Last Modified
<input type="checkbox"/> BJ - Cases by ALJ	8/2/2012 5:44:03 PM MIDDLEEARTH\bjones
<input type="checkbox"/> BJ - Intake Report	8/22/2012 3:56:25 PM MIDDLEEARTH\bjones

Reports may be generated at the click of a mouse or scheduled to be run on a periodic basis. The CaseLoad environment supports both “canned” and “ad hoc” reporting requirements. Virtually any information captured by the system can be reported on. It is a comprehensive, server-based solution that enables the creation, management, and delivery of both traditional, paper-oriented reports and interactive Web-based reports.
